 - Project System
- Business Process Reengineering
 - Workflow Management

The education concept of ERP

Experts & Teachers

Feedback

The courses:

Lectures,
Exercises,
Tests,

SAP Software

Virtual Enterprise

Education

Interactive form

The main problems

- Very limited support from SAP by the system installation and problems solving,
- Too expensive courses of SAP modules for education,
- Administration of SAP need a lot of work and qualifications, our system supervisor this year has found better job in industry (University can not quarantines high salaries for the technical staff),
- The hardware require upgrade (new server with high performance).

Conclusions

SAP - based E-Learning system

Poznań

Zielona Góra

Conclusions

- One central SAP system – a competence center.
- University labs should be connected via Internet, what not require own server infrastructure and specialized technical staff (cost reduction),
- The education materials should be created globally (in polish language),
- The teachers should be free possibility to take a party in seminars and SAP courses.
